*Importing Faith* May 02 2020 Many twenty-first-century evangelical charismatics in Britain are looking for a faith that works. They want to experience the miraculous in terms of healings and Godsent financial provision. Many have left the mainstream churches to join independent charismatic churches led by those who are perceived to have special insights and to teach principles that will help believers experience the miraculous. But all is not rosy in this promised paradise, and when people are not healed or they remain poor they are often told that it is because they did not have enough faith. This study discovers the origin of the principles that are taught by some charismatic leaders. Glyn Ackerley identifies them as the same ideas that are taught by the positive confession, health, wealth, and prosperity movement, originating in the United States. The origins of the ideas are traced back to New Thought metaphysics and its background philosophies of subjective idealism and pragmatism. These principles were imported into the UK through contact between British leaders and those influenced by American word of faith teachers. Glyn Ackerley explains the persuasiveness of such teachers by examining case studies, suggesting their miracles may well have social and psychological explanations rather than divine origins.

*Economics After the Crisis* Jul 16 2021 *Economics After the Crisis* is an introductory economics textbook, covering key topics in micro and macro economics. However, this book differs from other introductory economics textbooks in the perspective it takes, and it incorporates issues that are presently underserved by existing textbooks on the market. This book offers an introduction to economics that takes into account criticisms of the orthodox approach, and which acknowledges the role that this largely Western approach has played in the current global financial and economic crisis. A key feature of the book is its global approach: it offers examples from countries all over the world, including from developing and emerging economies. The chapters discuss all major economic topics, including individuals and households; the behaviour of consumers; the behaviour of firms; markets; the role of the state; public goods and commons; labour markets; capital markets; the macroeconomic flow; economic growth; international trade; nature and environmental externalities; poverty and wellbeing. Throughout, the book presents theoretical perspectives in which social structures, relatedness, uncertainty, and social norms provide key economic explanations, contrasting these with the idealized worldview of neoclassical economics. *Economics After the Crisis* is designed for a one-semester introductory course in economics, primarily at undergraduate but also at postgraduate level, and is suitable for students from a range of disciplines. It will be of particular relevance to those students with an interest in developing economies. <https://www.coursera.org/learn/economicsfromapluralistperspective>
