**Test Process Improvement** Dec 29 2019 Software Engineering / Testing Test Process Improvement A practical step-by-step guide to structured testing Tim Koomen Martin Pol If competitiveness is an issue in your market, IT will be vital, and this book will help you to

deal with the problems it will bring along. Henk W Broeders, Executive Board, CAP Gemini I was introduced to TPI and suddenly the penny dropped... This was quite a revelation... I recommend that you try the ideas suggested in this book... use the TPI method to improve your test process. Stephen K Allott, Senior Consultant, ImagoQA Ltd The application of TPI enables us to raise our global testing organization to the next professional level. I am absolutely convinced that everybody using TPI in a similar way will experience the same added value. Dr Hans Voorthuyzen, Global Manager Product Testing Group, Baan Software testing is an essential part of software development but many organizations regard it as an uncontrollable part of the process and find it difficult to take steps to improve it. In Test Process Improvement, Tim Koomen and Martin Pol give practical suggestions for improving the testing process in a gradual and controlled manner, with realistic goals in terms of quality, lead time and costs. The book describes and explains the Test Process Improvement (TPI) model, tried and tested by numerous professional testers, which provides a structured framework to be used either for improving an existing test process or for developing a new process from scratch. The authors use their in-depth knowledge and extensive experience to provide practical guidance and a framework that enables the reader to adapt the model for use in his/her organization. If you are involved in testing software systems and are aiming to implement a successful and structured process, you will find this book an invaluable resource. About the authors Tim Koomen is a professional tester for IQUIP Informatica B.V. in the Netherlands, where he is a member of the R&D team covering issues such as automated testing and testfactories. He is currently advising organizations on how to improve their testing processes using the TPI model. He regularly presents at conferences and training sessions throughout Europe. Martin Pol has over 25 years of experience in structured testing, currently working as an R&D manager with responsibility for development and innovation of testing methods for IQUIP Informatica B.V. and GiTek Software N.V. in Belgium. He was involved in the development of the structured testing approach, TMap, and the creation of TPI. He is a highly regarded speaker at conferences and training courses throughout Europe and the USA, having twice chaired EuroSTAR. He recently received the European Testing Excellence Award for his contribution to the field of testing. **Exploratory Software Testing** Sep 29 2022 How to Find and Fix the Killer Software Bugs that Evade Conventional Testing In Exploratory Software Testing, renowned software testing expert James Whittaker reveals the real causes of today's most serious, well-hidden software bugs--and introduces powerful new "exploratory" techniques for finding and correcting them. Drawing on nearly two decades of experience working at the cutting edge of testing with Google, Microsoft, and other top software organizations, Whittaker introduces innovative new processes for manual testing that are repeatable, prescriptive, teachable, and extremely effective. Whittaker defines both in-the-small techniques for individual testers and in-the-large techniques to supercharge test teams. He also introduces a hybrid strategy for injecting exploratory concepts into traditional scripted testing. You'll learn when to use each, and how to use them all successfully. Concise, entertaining, and actionable, this book introduces robust techniques that have been used extensively by real testers on shipping software, illuminating their actual experiences with these techniques, and the results they've achieved. Writing for testers, QA specialists, developers, program managers, and architects alike, Whittaker answers crucial questions such as: • Why do some bugs remain invisible to automated testing--and how can I uncover them? • What techniques will help me consistently discover and eliminate "show stopper" bugs? • How do I make manual testing more effective--and less boring and unpleasant? • What's the most effective high-level test strategy for each project? • Which inputs should I test when I can't test them all? • Which test cases will provide the best feature coverage? • How can I get better results by combining exploratory testing with traditional script or scenario-based testing? • How do I reflect feedback from the development process, such as code changes?

Publications Combined: Army Combat Fitness Test (ACFT) Training Guide, Handbook, Equipment List, Field Testing Manual & More May 02 2020 Over 600 total pages ... CONTENTS: Army Combat Fitness Test Training Guide Version 1.2 FIELD TESTING MANUAL Army Combat Fitness Test Version 1.4 Army Combat Fitness Test CALL NO. 18-37, September 2018 FM 7-22 ARMY PHYSICAL READINESS TRAINING, October 2012 IOC TESTING - ACFT EQUIPMENT LIST (1 X LANE REQUIREMENT) Version 1.1, 4 September 2018 ACFT Field Test Highlight Poster (Final) OVERVIEW: The Army will replace the Army Physical Fitness Test (APFT) with the Army Combat Fitness Test (ACFT) as the physical fitness test of record beginning in FY21. To accomplish this, the ACFT will be implemented in three phases. Phase 1 (Initial Operating Capability – IOC) includes a limited user Field Test with approximately 60 battalion-sized units from across all components of the Army. While the ACFT is backed by thorough scientific research and has undergone several revisions, there are still details that have not been finalized. The ACFT requires a testing site with a two-mile run course and a flat field space approximately 40 x 40 meters. The field space should be grass (well maintained and cut) or artificial turf that is generally flat and free of debris. While maintaining testing standards and requirements, commanders will make adjustments for local conditions when necessary. The start and finish point for the two-mile run course must be in close proximity to the Leg Tuck station. When test events are conducted indoors, the surface must be artificial turf only. Wood and rubberized surfaces are not authorized as they impact the speed of the Sprint-Drag-Carry. When environmental conditions prohibit outdoor testing, an indoor track may be used for the 2 Mile Run. The Test OIC or NCOIC are responsible to inspect and certify the site and determine the number of testing lanes. There should not be more than 4 Soldiers per testing group for the SPT, HRP, and SDC. The OIC or NCOIC must add additional lanes or move Soldiers to a later testing session to ensure no more than 4 Soldiers per testing group. Concerns related to Soldiers, graders, or commanders will be addressed prior to test day. The number of lanes varies by number of Soldiers testing. A 16-lane ACFT site will have the following: ACFT specific test equipment requirements: 16 hexagon/trap bars (60 pounds), each with a set of locking collars. While all NSN approved hexagon bars must weigh 60 pounds, there is always a small manufacturer's production tolerance. The approved weight tolerance for the hexagon bar is + 2 pounds (58-62 pounds). Weight

tolerance for the hexagon bar and therefore the 3 Repetition Maximum Deadlift does not include the collars. On average hexagon bar collars weigh 2.0 pounds per pair and are considered incidental to the total weight of the MDL weight. Approximately 3,000 lbs. of bumper plates. 16 x 10 lb. medicine ball 16 x nylon sled with pull straps. 32 x 40 lb. kettle bells. Permanent or mobile pull up bars (16 x pull-up bars at approximately 7.5 feet off the ground with, step-ups for shorter Soldiers). Common unit equipment for set-up and grading: 16 stop watches. 8 x 25m tape measures. 8 x wooden or PVC marking sticks for the SPT. One stick for every two lanes. 70 x 18" traffic cones. 50 field / dome cones. A soft, flat, dry test area approximately 40m x 40m on grass or artificial turf (half of a soccer or football field). A site that is free of any significant hazards. A preparation area (can be same as briefing area) to conduct Preparation Drill. A generally flat, measured running course with a solid, improved surface that is not more than 3 percent uphill grade and has no overall decline (start and finish must be at the same altitude).
